

Thursday, Nov. 20, 2008
5:00 p.m. – 7:00 p.m.

Hosted by:  **coderefinery**
COMPLIANCE, NOT COMPLICATIONS

You're invited to our next networking event for business development professionals in North Carolina's life sciences companies, universities and governmental organizations. Our program host will be Code Refinery. Code Refinery gives companies complete confidence in their product's software, and peace of mind that it will meet the highest standards for FDA compliance and real-world operation.

This event is open only to senior business development professionals in North Carolina's biotechnology, pharmaceutical, diagnostic, medical device, and agricultural and veterinary organizations. Each meeting provides the opportunity to:

- Expand contacts with companies making investments and form partnerships in our industry
- Learn benchmark terms of recent licensing deals
- Get names of companies serving as beta sites for new technology applications and products
- Develop insights into partnership management issues and how to manage them

Traditional networking kicks off this event, followed by a brief welcome and overview from Code Refinery management. Announcements and open discussions will follow. Refreshments are compliments of our host. Information about our host and directions to the event follow.

Steering Committee

Dennis Burns, TCG (dennis@t-c-group.com)

Gregg Davis, GlaxoSmithKline (gregory.j.davis@gsk.com)

Pamela Gaster, NC Biotechnology Center (pamela_gaster@ncbiotech.org)

Upcoming Events

Dec. 18

Jan. 15

Feb. 19

**Please RSVP to LSBDP@ncbiotech.org
no later than November 17, 2008.**

ABOUT OUR HOST

The FDA approval process products containing software used by hospitals, diagnostic labs, manufacturers of medical devices is challenging, complex, and costly. Companies who build these innovative solutions cannot afford to be less than 100% certain about these systems used for life-critical and mission-critical situations – patient well being, a company's reputation, and maybe their entire company, is on the line.

Code Refinery gives companies complete confidence in their software product and peace of mind that it will meet the highest standards for FDA compliance and real-world operation. They deliver tangible results that allow their clients to meet regulations necessary to bring a product to market and maintain compliance. Their state-of-the-art software solutions will save you both time and money in getting your products to the marketplace.
